

SELECTION OF OVEN

HOW TO FIND THE BEST JOSPER OVEN MODEL FOR OUR NEEDS

First of all you have to find out the right size. We have 4 standard sizes:

Reference number	Capacity (seats)	Out Size in cm	Grill size
38	30	71 x 42	58 x 34
25	70	60 x 60	50 x 51
45	100	93 x 60	76 x 51
50	150	93 x 86	76 x 75

Size 38 is suitable for snack bar, small bars or restaurants. It's a counter top unit.

Then, sizes 25, 45 and 50 are suitable in all kind of restaurants, hotel, etc. just checking your seats capacity.

Size 50 is also suitable for banqueting and catering.

Now it's time to define the model. That is to say, to find out our kitchen needs in terms of accessories, tray support, cupboard, etc.

HJX38PM MODEL

Size 38 only admits one combination.

It's HJX38PM.

This is a counter top unit and can be installed at 90cm high, the usual height in tables work, kitchens, neutral furnishings, etc.

REFERENCE LETTER 'M'

Reference letter "M" indicates the basic model.

In this case, you have to design a table or stand at maximum high 55cm. This is not a counter top unit; it's just our basic model.

REFERENCE LETTER 'L'

Reference letter "L" includes its own table.

This combination is ready to use, in the right high for cooking (grill racks will be about 110cm high).

You can add a set of wheels on the table for this model.

You can add the wheels in order to be easy to move for cleaning purpose, or just move it to different places into your restaurant. Important read installation tips.

Both combination, M and L can have an upper tray support.

REFERENCE LETTER 'LACXP'

We also have model L-ACX-P. This option is the most complete. The oven is surrounded by a piece of stainless steel furniture that leaves it completely isolated from the heat. Including support table with wheels and a full warming cabinet for garnishes, tempering meats, etc.

FULL SOLUTION HOOD INCLUDED

Finally, we have a full solution with a hood included. In this case, the outlet pipe diameter must be minimum 300mm.

In short, the first thing is to indicate the number of oven size and then the combination of letters that shows the accessories.

ALL JOSPER MODELS NEED TO BE INSTALLED UNDER A VENTILATION HOOD.

There are two options:

First option is to install a pipe from the oven outlet to outside the kitchen. In that case you do not need any extra accessories.

Second and most popular is to include a firebreak and a stainless steel cowl.

Firebreak

Prevents sparks and flames from entering the ventilation ducts.

Stainless Steel Cowl

Cools the smoke temperature and makes it enter the hood more gently, avoiding turbulence and possible blowback while increasing the safety of the firebreak.

We are a company specialized in manufacturing of our charcoal ovens. We use the highest quality, the best steels and high technology materials to produce a high quality product. It is a 100% made in Spain, perfect processing down to the smallest detail.
